

Horizontal LIM machines

Horizontal machines for the production of liquid silicone parts are said to offer considerable advantages. With the company's 100 ton horizontal machine, new and various applications are said to be covered, and an optimized set-up for future requirements is achieved. The main application area for the horizontal silicone injection molding machines is the production of LIM parts in medical, pharmaceutical and automotive applications. The strong design of the machine reduces flash, and therefore the waste rate is kept to a minimum. The electrical cabinet has been integrated, and the covers and base frame are redesigned for an optimized footprint. (Maplan)
